Experience

Operations Systems Technical Lead - QA and Data Strategy

Aug 2024 - June 2025

ONxpress Transportation Partners / Metrolinx

Toronto, ON

- Designed and implemented a department-wide test and analytics strategy used by a 40+ member team of engineers and managers to evaluate dataset performance, system integration, end-to-end functionality, and accessibility of the ONxpress software platform.
- Authored client submittals, Interface Control Docs (ICDs), and Confluence pages for 100+ staff, outlining timelines, architecture, acceptance criteria, and cloud resources to ensure stakeholder alignment and reduce project delays by 25%.
- Led cross-functional collaboration between developers, testers and business teams to ensure accurate data transmission by implementing validation protocols and triaging bugs in Jira, reducing deployment time and recurring issues by 50%.
- Defined integration use cases and technical requirements with solution architects and business leads, facilitating communication between technical teams and product stakeholders.
- Evaluated mobile device solutions through A/B user testing to identify the optimal deployment aligned with client requirements, ensuring seamless system integration and achieving \$150k+ in procurement savings.
- Presented a proposal for data infrastructure and analytics tools to IT executives, successfully securing on-budget solutions to support testing, reporting, and governance for integration testing and analytics.

Operations Systems Senior QA Analyst

Aug 2023 - Aug 2024

ONxpress Transportation Partners / Metrolinx

Toronto, ON

- Built ELT pipelines to integrate GPS, network, and operational data into client databases, leveraging optimized SQL queries to increase data processing efficiency by 75% and significantly reduce manual handling.
- Developed and executed API endpoint validation scenarios for critical services across Azure and Oracle cloud environments, ensuring data integrity and compliance with functional requirements.
- Optimized Jira-Zephyr integration within the ONxpress test workflow, improving collaboration, traceability, and reducing resolution lead time by 20%, while providing actionable analytics and insights to stakeholders.
- Created interactive Power BI dashboards and live reports, enabling stakeholders to monitor test coverage, progress analytics, defect trends, and completion in real-time, enhancing transparency and communication with clients.

FPGA Software Analyst Intern

Sept 2021 - Sept 2022

Thales Group

Toronto, ON

- Developed and automated vehicle on-board controller software tests in C and Python, improving code quality through comprehensive Blackbox, Whitebox, and Aggregate testing.
- Automated VectorCAST unit test imports using Bash scripts, improving efficiency and reducing setup time by over 50% for the team.
- Collaborated in an agile environment using IBM DOORS, Bitbucket, Jira, and Git to manage requirements and testing procedures.

Technical Skills

Workflow & Collaboration: Jira, Power BI, Confluence, Kanban, Tableau

Languages: Python, Bash, PowerShell, SQL, R, TypeScript, JavaScript, Java, C++

Frameworks & CI/CD: Git, GitHub Actions, GitLab, Jenkins, React, Next.js, Node.js

AI Tools & QA: Claude, Copilot, LMStudio, Docker, Zephyr, Selenium, JMeter, SoapUI

Cloud & Virtualization: Azure, Oracle Cloud, AWS, VirtualBox

Databases: MySQL, PostgreSQL, MongoDB

Education

Bachelor of Computer Science

Sept 2018 - April 2023

Ontario Tech University

- Recognized on President's list 2020-2023

Projects

DIY HomeLab | pfSense, SNMP, NAS, Routing Protocols, VLAN

- Designed and configured a home lab with a DIY pfSense router, managed switches, SNMP monitoring and network-attached storage (NAS) to simulate enterprise-grade networking.
